

REDi Card Control

Enhance user experience, reduce fraud losses, and drive down operating expenses.

Defeating card fraud, one decision at a time

Your customers are your most effective resource in fighting fraud, and REDiCardControl turns your mobile app and online banking platform into powerful tools that empower them to easily control how, where, and when their cards can be used.

Personalized Functionality

Every customer or member is different. One may travel on a regular basis, while another rarely leaves their town. With REDiCardControl, customers can ensure their cards will work seamlessly when and where they're going by alerting your institution of their trip. Additionally, they can opt to disallow transactions occurring based on their own selections.

Instant Card Control

When a card is lost or stolen, every second counts. Customers can turn off their cards with a few taps or clicks, avoiding the potential cost of covering their losses and the expense of human intervention, all while enhancing the user's experience.

Intuitive Interface

Today's customer demands fast, easy, effective solutions. REDiCardControl delivers an intuitive interface thoughtfully designed to eliminate barriers and the frustration of encountering them. Customers can activate or deactivate security settings, control real-time notifications, and set limits at their convenience with a few taps or clicks
